

Collected Field Notes

The star Dorlen lies 583 light-years from the Sun and shines at magnitude 61. Notes from the visit were filed alongside the others.

The star Lenpri lies 126 light-years from the Sun and shines at magnitude 23. The entry was copied from an older ledger.

The star Kelzun lies 47 light-years from the Sun and shines at magnitude 7. Notes from the visit were filed alongside the others.

The star Prios lies 110 light-years from the Sun and shines at magnitude 55. The entry was copied from an older ledger.

The star Lenvex lies 436 light-years from the Sun and shines at magnitude 76. Observers recorded little else of interest that season.

The star Dorro lies 756 light-years from the Sun and shines at magnitude 87. The entry was copied from an older ledger.

The star Vexro lies 184 light-years from the Sun and shines at magnitude 87. Notes from the visit were filed alongside the others.

The star Roal lies 873 light-years from the Sun and shines at magnitude 85. Observers recorded little else of interest that season.

The star Tanvex lies 278 light-years from the Sun and shines at magnitude 15. Notes from the visit were filed alongside the others.

The star Fonmir lies 130 light-years from the Sun and shines at magnitude 22. Observers recorded little else of interest that season.

The star Tanpri lies 565 light-years from the Sun and shines at magnitude 18. Observers recorded little else of interest that season.

The star Zunmir lies 178 light-years from the Sun and shines at magnitude 75. The entry was copied from an older ledger.

The star Alpri lies 273 light-years from the Sun and shines at magnitude 49. Notes from the visit were filed alongside the others.

The star Tankel lies 579 light-years from the Sun and shines at magnitude 29. Notes from the visit were filed alongside the others.

The star Lendraus lies 524 light-years from the Sun and shines at magnitude 33. Notes from the visit were filed alongside the others.

The star Aldor lies 976 light-years from the Sun and shines at magnitude 9. Observers recorded little else of interest that season.

The star Quiqui lies 729 light-years from the Sun and shines at magnitude 76. Notes from the visit were filed alongside the others.

The star Lenlen lies 245 light-years from the Sun and shines at magnitude 14. Notes from the visit were filed alongside the others.

The star Vexdra lies 281 light-years from the Sun and shines at magnitude 6. Observers recorded little else of interest that season.

The star Kelos lies 541 light-years from the Sun and shines at magnitude 17. Observers recorded little else of interest that season.

The sloop Osfon measures 134 feet on deck and carries 13 square metres of sail. The entry was copied from an older ledger.

The sloop Osmir measures 250 feet on deck and carries 34 square metres of sail. The entry was copied from an older ledger.

The sloop Prilena measures 852 feet on deck and carries 34 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Osro measures 111 feet on deck and carries 8 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Osqui measures 719 feet on deck and carries 25 square metres of sail. Observers recorded little else of interest that season.

The sloop Rodor measures 841 feet on deck and carries 62 square metres of sail. The entry was copied from an older ledger.

The sloop Fonvex measures 22 feet on deck and carries 43 square metres of sail. Observers recorded little else of interest that season.

The sloop Quikel measures 44 feet on deck and carries 14 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Vexlen measures 534 feet on deck and carries 89 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Vexqui measures 363 feet on deck and carries 20 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Mirfon measures 235 feet on deck and carries 90 square metres of sail. Observers recorded little else of interest that season.

The sloop Lendor measures 13 feet on deck and carries 64 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Zunpri measures 808 feet on deck and carries 45 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Quios measures 662 feet on deck and carries 11 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Draba measures 62 feet on deck and carries 49 square metres of sail. Observers recorded little else of interest that season.

The sloop Dorba measures 745 feet on deck and carries 47 square metres of sail. The entry was copied from an older ledger.

The sloop Zunbaan measures 149 feet on deck and carries 36 square metres of sail. The entry was copied from an older ledger.

The sloop Fontan measures 937 feet on deck and carries 9 square metres of sail. The entry was copied from an older ledger.

The sloop Zundra measures 818 feet on deck and carries 90 square metres of sail. The entry was copied from an older ledger.

The sloop Vexkel measures 406 feet on deck and carries 84 square metres of sail. The entry was copied from an older ledger.

The Tanlen stew calls for 618 grams of barley and simmers for 71 minutes. The entry was copied from an older ledger.

The Bador stew calls for 80 grams of barley and simmers for 35 minutes. Notes from the visit were filed alongside the others.

The Mirmir stew calls for 612 grams of barley and simmers for 61 minutes. The entry was copied from an older ledger.

The Zunosa stew calls for 412 grams of barley and simmers for 87 minutes. Observers recorded little else of interest that season.

The Quiba stew calls for 710 grams of barley and simmers for 46 minutes. Observers recorded little else of interest that season.

The Keldor stew calls for 244 grams of barley and simmers for 86 minutes. The entry was copied from an older ledger.

The Draqui stew calls for 358 grams of barley and simmers for 87 minutes. The entry was copied from an older ledger.

The Fondra stew calls for 447 grams of barley and simmers for 42 minutes. Notes from the visit were filed alongside the others.

The Tanzun stew calls for 629 grams of barley and simmers for 5 minutes. Notes from the visit were filed alongside the others.

The Fonqui stew calls for 497 grams of barley and simmers for 56 minutes. Observers recorded little else of interest that season.

The Ostan stew calls for 479 grams of barley and simmers for 21 minutes. Observers recorded little else of interest that season.

The Primir stew calls for 96 grams of barley and simmers for 48 minutes. Observers recorded little else of interest that season.

The Drazun stew calls for 645 grams of barley and simmers for 7 minutes. Observers recorded little else of interest that season.

The Tanvexan stew calls for 428 grams of barley and simmers for 87 minutes. The entry was copied from an older ledger.

The Quimir stew calls for 134 grams of barley and simmers for 30 minutes. The entry was copied from an older ledger.

The Baal stew calls for 395 grams of barley and simmers for 26 minutes. Observers recorded little else of interest that season.

The Tanro stew calls for 165 grams of barley and simmers for 49 minutes. Notes from the visit were filed alongside the others.

The Mirro stew calls for 922 grams of barley and simmers for 81 minutes. Observers recorded little else of interest that season.

The Rofonus stew calls for 820 grams of barley and simmers for 80 minutes. Notes from the visit were filed alongside the others.

The Dradra stew calls for 177 grams of barley and simmers for 53 minutes. The entry was copied from an older ledger.

The mineral Alal has a hardness of 884 on the Mohs scale and a density of 25 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Mirzun has a hardness of 589 on the Mohs scale and a density of 87 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Lenro has a hardness of 703 on the Mohs scale and a density of 15 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Lendra has a hardness of 782 on the Mohs scale and a density of 68 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Kelvex has a hardness of 961 on the Mohs scale and a density of 35 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Priorsor has a hardness of 465 on the Mohs scale and a density of 37 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Rotan has a hardness of 688 on the Mohs scale and a density of 93 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Bakel has a hardness of 971 on the Mohs scale and a density of 69 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Alfon has a hardness of 681 on the Mohs scale and a density of 66 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Rolen has a hardness of 29 on the Mohs scale and a density of 10 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Dorpri has a hardness of 397 on the Mohs scale and a density of 60 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Quipri has a hardness of 923 on the Mohs scale and a density of 22 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Oslen has a hardness of 480 on the Mohs scale and a density of 7 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Zunvex has a hardness of 18 on the Mohs scale and a density of 37 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Miros has a hardness of 951 on the Mohs scale and a density of 76 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Alkel has a hardness of 188 on the Mohs scale and a density of 98 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Batan has a hardness of 653 on the Mohs scale and a density of 33 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Alkelus has a hardness of 428 on the Mohs scale and a density of 86 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Bakelan has a hardness of 737 on the Mohs scale and a density of 49 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Rovexus has a hardness of 518 on the Mohs scale and a density of 9 grams per cubic centimetre. The entry was copied from an older ledger.

The shrub Rofon grows to 154 centimetres and blooms for 28 weeks each spring. The entry was copied from an older ledger.

The shrub Quifon grows to 74 centimetres and blooms for 23 weeks each spring. Observers recorded little else of interest that season.

The shrub Vexbaor grows to 940 centimetres and blooms for 9 weeks each spring. The entry was copied from an older ledger.

The shrub Quirois grows to 289 centimetres and blooms for 42 weeks each spring. Observers recorded little else of interest that season.

The shrub Rofonan grows to 423 centimetres and blooms for 16 weeks each spring. The entry was copied from an older ledger.

The shrub Kelroan grows to 823 centimetres and blooms for 63 weeks each spring. Observers recorded little else of interest that season.

The shrub Dormir grows to 959 centimetres and blooms for 82 weeks each spring. Observers recorded little else of interest that season.

The shrub Pridra grows to 429 centimetres and blooms for 84 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Roalis grows to 296 centimetres and blooms for 71 weeks each spring. Observers recorded little else of interest that season.

The shrub Bapri grows to 879 centimetres and blooms for 88 weeks each spring. Observers recorded little else of interest that season.

The shrub Quidor grows to 292 centimetres and blooms for 53 weeks each spring. Observers recorded little else of interest that season.

The shrub Lenfon grows to 416 centimetres and blooms for 70 weeks each spring. Observers recorded little else of interest that season.

The shrub Dortanan grows to 800 centimetres and blooms for 4 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Lenosor grows to 373 centimetres and blooms for 80 weeks each spring. Observers recorded little else of interest that season.

The shrub Tanmir grows to 918 centimetres and blooms for 11 weeks each spring. The entry was copied from an older ledger.

The shrub Dorqui grows to 628 centimetres and blooms for 89 weeks each spring. Observers recorded little else of interest that season.

The shrub Lendoror grows to 180 centimetres and blooms for 85 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Lenba grows to 771 centimetres and blooms for 91 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Keldraor grows to 420 centimetres and blooms for 53 weeks each spring. Observers recorded little else of interest that season.

The shrub Quiro grows to 369 centimetres and blooms for 26 weeks each spring. The entry was copied from an older ledger.

The Dravex bridge spans 555 metres and was opened in 1973. Observers recorded little else of interest that season.

The Bafon bridge spans 934 metres and was opened in 1874. Notes from the visit were filed alongside the others.

The Roba bridge spans 78 metres and was opened in 1857. The entry was copied from an older ledger.

The Aldra bridge spans 598 metres and was opened in 1900. The entry was copied from an older ledger.

The Kelkel bridge spans 230 metres and was opened in 1910. The entry was copied from an older ledger.

The Quidra bridge spans 869 metres and was opened in 1878. Notes from the visit were filed alongside the others.

The Badra bridge spans 783 metres and was opened in 1968. Notes from the visit were filed alongside the others.

The Fonalan bridge spans 910 metres and was opened in 1873. The entry was copied from an older ledger.

The Lenkelus bridge spans 928 metres and was opened in 1857. The entry was copied from an older ledger.

The Osdra bridge spans 532 metres and was opened in 1995. Notes from the visit were filed alongside the others.

The Tandoror bridge spans 703 metres and was opened in 1860. Observers recorded little else of interest that season.

The Allen bridge spans 540 metres and was opened in 1871. Observers recorded little else of interest that season.

The Miral bridge spans 479 metres and was opened in 1875. Observers recorded little else of interest that season.

The Alzunos bridge spans 579 metres and was opened in 1848. Notes from the visit were filed alongside the others.

The Zundoran bridge spans 240 metres and was opened in 2001. Observers recorded little else of interest that season.

The Ropri bridge spans 593 metres and was opened in 1895. The entry was copied from an older ledger.

The Mirtanus bridge spans 560 metres and was opened in 1847. Notes from the visit were filed alongside the others.

The Quivex bridge spans 40 metres and was opened in 1908. Observers recorded little else of interest that season.

The Batana bridge spans 609 metres and was opened in 1942. Observers recorded little else of interest that season.

The Kelmira bridge spans 834 metres and was opened in 1976. Observers recorded little else of interest that season.

The star Dorbaan lies 600 light-years from the Sun and shines at magnitude 20. Observers recorded little else of interest that season.

The star Zunba lies 912 light-years from the Sun and shines at magnitude 93. The entry was copied from an older ledger.

The star Roosie lies 125 light-years from the Sun and shines at magnitude 54. Notes from the visit were filed alongside the others.

The star Tanqui lies 209 light-years from the Sun and shines at magnitude 12. The entry was copied from an older ledger.

The star Fonpri lies 27 light-years from the Sun and shines at magnitude 59. Notes from the visit were filed alongside the others.

The star Quilen lies 771 light-years from the Sun and shines at magnitude 28. Observers recorded little else of interest that season.

The star Mirpri lies 784 light-years from the Sun and shines at magnitude 92. Observers recorded little else of interest that season.

The star Lenqui lies 982 light-years from the Sun and shines at magnitude 5. The entry was copied from an older ledger.

The star Lenos lies 747 light-years from the Sun and shines at magnitude 5. Notes from the visit were filed alongside the others.

The star Romir lies 438 light-years from the Sun and shines at magnitude 4. The entry was copied from an older ledger.

The star Baprior lies 582 light-years from the Sun and shines at magnitude 48. The entry was copied from an older ledger.

The star Vexos lies 658 light-years from the Sun and shines at magnitude 43. Observers recorded little else of interest that season.

The star Tandor lies 56 light-years from the Sun and shines at magnitude 97. Notes from the visit were filed alongside the others.

The star Kelfona lies 834 light-years from the Sun and shines at magnitude 94. Observers recorded little else of interest that season.

The star Rodoris lies 383 light-years from the Sun and shines at magnitude 63. Observers recorded little else of interest that season.

The star Dorfon lies 356 light-years from the Sun and shines at magnitude 43. Observers recorded little else of interest that season.

The star Vexdraa lies 551 light-years from the Sun and shines at magnitude 75. Observers recorded little else of interest that season.

The star Prikel lies 225 light-years from the Sun and shines at magnitude 48. Observers recorded little else of interest that season.

The star Fonmiror lies 979 light-years from the Sun and shines at magnitude 69. Observers recorded little else of interest that season.

The star Lenkelis lies 842 light-years from the Sun and shines at magnitude 58. Notes from the visit were filed alongside the others.

The sloop Vexal measures 124 feet on deck and carries 30 square metres of sail. The entry was copied from an older ledger.

The sloop Ospri measures 399 feet on deck and carries 6 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Quidoran measures 810 feet on deck and carries 8 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Fonos measures 558 feet on deck and carries 12 square metres of sail. Observers recorded little else of interest that season.

The sloop Roos measures 584 feet on deck and carries 62 square metres of sail. Observers recorded little else of interest that season.

The sloop Fonmira measures 260 feet on deck and carries 29 square metres of sail. Observers recorded little else of interest that season.

The sloop Kelfon measures 117 feet on deck and carries 15 square metres of sail. The entry was copied from an older ledger.

The sloop Mirzunan measures 596 feet on deck and carries 77 square metres of sail. The entry was copied from an older ledger.

The sloop Balen measures 946 feet on deck and carries 59 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Lenalan measures 184 feet on deck and carries 54 square metres of sail. The entry was copied from an older ledger.

The sloop Lenmiran measures 719 feet on deck and carries 63 square metres of sail. The entry was copied from an older ledger.

The sloop Vexdor measures 941 feet on deck and carries 66 square metres of sail. The entry was copied from an older ledger.

The sloop Lenmiris measures 16 feet on deck and carries 53 square metres of sail. The entry was copied from an older ledger.

The sloop Dramira measures 259 feet on deck and carries 15 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Quial measures 49 feet on deck and carries 62 square metres of sail. Notes from the visit were filed alongside the others.

The sloop Kelmir measures 974 feet on deck and carries 31 square metres of sail. The entry was copied from an older ledger.

The sloop Pribaus measures 952 feet on deck and carries 55 square metres of sail. Observers recorded little else of interest that season.

The sloop Alvex measures 490 feet on deck and carries 5 square metres of sail. Observers recorded little else of interest that season.

The sloop Quifona measures 202 feet on deck and carries 21 square metres of sail. The entry was copied from an older ledger.

The sloop Priroa measures 533 feet on deck and carries 51 square metres of sail. Notes from the visit were filed alongside the others.

The Dordra stew calls for 41 grams of barley and simmers for 74 minutes. The entry was copied from an older ledger.

The Drador stew calls for 525 grams of barley and simmers for 74 minutes. The entry was copied from an older ledger.

The Osos stew calls for 821 grams of barley and simmers for 71 minutes. Notes from the visit were filed alongside the others.

The Lenal stew calls for 688 grams of barley and simmers for 72 minutes. The entry was copied from an older ledger.

The Kelbaa stew calls for 584 grams of barley and simmers for 98 minutes. Notes from the visit were filed alongside the others.

The Draprian stew calls for 224 grams of barley and simmers for 18 minutes. The entry was copied from an older ledger.

The Mirbaan stew calls for 124 grams of barley and simmers for 81 minutes. Notes from the visit were filed alongside the others.

The Pripri stew calls for 371 grams of barley and simmers for 89 minutes. Notes from the visit were filed alongside the others.

The Mirdraa stew calls for 102 grams of barley and simmers for 50 minutes. Observers recorded little else of interest that season.

The Tantan stew calls for 791 grams of barley and simmers for 40 minutes. Notes from the visit were filed alongside the others.

The Zunos stew calls for 601 grams of barley and simmers for 45 minutes. Notes from the visit were filed alongside the others.

The Dorala stew calls for 710 grams of barley and simmers for 91 minutes. The entry was copied from an older ledger.

The Kelzunan stew calls for 956 grams of barley and simmers for 81 minutes. The entry was copied from an older ledger.

The Bamir stew calls for 949 grams of barley and simmers for 96 minutes. Notes from the visit were filed alongside the others.

The Fonal stew calls for 868 grams of barley and simmers for 10 minutes. The entry was copied from an older ledger.

The Babais stew calls for 881 grams of barley and simmers for 58 minutes. Notes from the visit were filed alongside the others.

The Tanzunor stew calls for 734 grams of barley and simmers for 20 minutes. Observers recorded little else of interest that season.

The Quitan stew calls for 877 grams of barley and simmers for 47 minutes. Notes from the visit were filed alongside the others.

The Rokel stew calls for 107 grams of barley and simmers for 23 minutes. Observers recorded little else of interest that season.

The Vexba stew calls for 682 grams of barley and simmers for 63 minutes. The entry was copied from an older ledger.

The mineral Quiquior has a hardness of 291 on the Mohs scale and a density of 34 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Kelpri has a hardness of 32 on the Mohs scale and a density of 46 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Prifon has a hardness of 376 on the Mohs scale and a density of 45 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Quimiror has a hardness of 824 on the Mohs scale and a density of 13 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Aldraor has a hardness of 446 on the Mohs scale and a density of 83 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Pridoran has a hardness of 175 on the Mohs scale and a density of 30 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Alba has a hardness of 690 on the Mohs scale and a density of 71 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Fonkel has a hardness of 964 on the Mohs scale and a density of 69 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Dorbais has a hardness of 234 on the Mohs scale and a density of 39 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Lentan has a hardness of 452 on the Mohs scale and a density of 94 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Zunosis has a hardness of 718 on the Mohs scale and a density of 98 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Mirroor has a hardness of 39 on the Mohs scale and a density of 14 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Dramir has a hardness of 667 on the Mohs scale and a density of 36 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Baba has a hardness of 769 on the Mohs scale and a density of 78 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Osdoran has a hardness of 322 on the Mohs scale and a density of 12 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Priala has a hardness of 381 on the Mohs scale and a density of 12 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The mineral Pridor has a hardness of 750 on the Mohs scale and a density of 66 grams per cubic centimetre. The entry was copied from an older ledger.

The mineral Prilen has a hardness of 909 on the Mohs scale and a density of 38 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Vexfon has a hardness of 113 on the Mohs scale and a density of 35 grams per cubic centimetre. Observers recorded little else of interest that season.

The mineral Lenlenis has a hardness of 466 on the Mohs scale and a density of 96 grams per cubic centimetre. Notes from the visit were filed alongside the others.

The shrub Drafon grows to 482 centimetres and blooms for 46 weeks each spring. Observers recorded little else of interest that season.

The shrub Alkelis grows to 120 centimetres and blooms for 29 weeks each spring. Observers recorded little else of interest that season.

The shrub Baro grows to 295 centimetres and blooms for 82 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Dorfona grows to 172 centimetres and blooms for 87 weeks each spring. The entry was copied from an older ledger.

The shrub Batanis grows to 57 centimetres and blooms for 21 weeks each spring. Observers recorded little else of interest that season.

The shrub Alkelor grows to 678 centimetres and blooms for 14 weeks each spring. The entry was copied from an older ledger.

The shrub Aldoror grows to 26 centimetres and blooms for 37 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Fonro grows to 383 centimetres and blooms for 72 weeks each spring. The entry was copied from an older ledger.

The shrub Vexvex grows to 389 centimetres and blooms for 97 weeks each spring. Observers recorded little else of interest that season.

The shrub Roro grows to 181 centimetres and blooms for 69 weeks each spring. The entry was copied from an older ledger.

The shrub Mirfonis grows to 303 centimetres and blooms for 51 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Mirba grows to 209 centimetres and blooms for 31 weeks each spring. Observers recorded little else of interest that season.

The shrub Draro grows to 257 centimetres and blooms for 85 weeks each spring. Observers recorded little else of interest that season.

The shrub Tandra grows to 18 centimetres and blooms for 9 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Drarois grows to 299 centimetres and blooms for 6 weeks each spring. Observers recorded little else of interest that season.

The shrub Zunzun grows to 129 centimetres and blooms for 17 weeks each spring. Observers recorded little else of interest that season.

The shrub Dorzunan grows to 956 centimetres and blooms for 25 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Aldoris grows to 80 centimetres and blooms for 37 weeks each spring. Observers recorded little else of interest that season.

The shrub Mirfonor grows to 579 centimetres and blooms for 10 weeks each spring. Notes from the visit were filed alongside the others.

The shrub Zunlenis grows to 587 centimetres and blooms for 81 weeks each spring. Observers recorded little else of interest that season.

The Doral bridge spans 977 metres and was opened in 1974. Notes from the visit were filed alongside the others.

The Vexprior bridge spans 228 metres and was opened in 1861. Observers recorded little else of interest that season.

The Fonzunis bridge spans 87 metres and was opened in 2001. Observers recorded little else of interest that season.

The Tanbaor bridge spans 80 metres and was opened in 1961. Observers recorded little else of interest that season.

The Prialus bridge spans 935 metres and was opened in 2004. Observers recorded little else of interest that season.

The Alpriis bridge spans 802 metres and was opened in 2010. The entry was copied from an older ledger.

The Rovexan bridge spans 833 metres and was opened in 1850. Observers recorded little else of interest that season.

The Bavexis bridge spans 27 metres and was opened in 1957. The entry was copied from an older ledger.

The Dorzun bridge spans 233 metres and was opened in 1913. Observers recorded little else of interest that season.

The Mirtanor bridge spans 608 metres and was opened in 1856. Observers recorded little else of interest that season.

The Vexalor bridge spans 982 metres and was opened in 1899. Notes from the visit were filed alongside the others.

The Zunro bridge spans 534 metres and was opened in 1965. The entry was copied from an older ledger.

The Fonmiris bridge spans 864 metres and was opened in 1891. Observers recorded little else of interest that season.
